About This File

IpPbx Controller is a small application which automatically pauses a media player like winamp or Windows Media Player when you're receiving or making phone calls. And it automatically changes your MSN/Live Messenger status to "On the phone" when you're in a phone call.

Supported media player:

- Windows Media Player 9 or newer
- Winamp (local or remote by using Browseamp plugin)
- Roku Soundbridge
- Generic (sending keystrokes similar to modern keyboards' play/pause keys)

Requirements:

- SwyxIt v4.20 or newer (v6.02 recommended)
- Microsoft.Net Framework 2.0

Installation:

Unpack the ZIP file and double click the MSI file to start the installation.

Update from older versions:

Unfortunately there is a bug in the 1.30.0010.0 build. When you update from that version to the latest one, Windows Media Player cannot be controlled. Double click this version's MSI file again and choose the "Repair" option to fix that.

What's new:

- Setup offers to create a desktop shortcut
- Fix: IpPbxController lets Roku Soundbridge play when a phone call ends, but Soundbridge was not playing before the phone call.

This tool was originally published on the old Swyx Forum page at 25.07.2007.

What's New in Version 1.30.0020.0 [See changelog](#) ▼

Released November 12, 2017

No changelog available for this version.
