This article is taken from the Swyx Forum Archive (2007-2014) and was originally posted 27.11.2010 by me.

When dialing within SwyxWare (regardless if in a SwyxIt!, SwyxPhone or even a Connect To block within the Call Routing) you can use the following special dial codes:

- x - wait for the call to be connected
- , (comma) - wait for 2 seconds

Example:

- 123x#,66

Calls for example a door opener at extension 123, waits for the call to be connected, waits for two seconds, dials #, wait another 4 seconds, dials 66

You should also take a look into the [Feature Codes](#) list.
